COMPRESSORBOT
compressorbot.com

Greetings,

In week five we have started to develop the foundation for a fully functional compressorbot.com. You can access the development site at http://compressorbot.com/development/site/ you will need to use username: guest and password: wfp0212 to access the development site. You can also use those credentials to log into the site or create your own user, you will need to use the login on the site before accessing any page except for the home page. The registration popup and the edit profile pop up are almost fully functional primarily what is left will be to connect with Paypal to process payments so for now it will redirect to the compress page as well as a some more error handling. The login and logout process is functioning it just requires error feedback for the user. I have also made thesite so if some one attempts to access the compress/decompress pages without logging in they will be redirected back to the home page. The contact us pop up is almost fully functional this part as with the others requires an error feedback system and I need to add in a few more subject choices.

I have also addressed the request for feedback on how long it will take for us to respond once a user submits a contact request and I have change the edit profile pop up so it is more horizontal instead of vertical. I will be addressing the idea of adding in uses left as well as offering some sort of incentive this week. As well in week 6 I will be focusing on adding in the Paypal payment system. I also hope to complete in the next connecting the validator for html/css, CSSlint, and JSlint options. I also will be addressing the issues I spoke of above with all of the popup windows. Once all of that is completed, hopefully early next week, I will be creating the compression and decompression functionality as well as adding in the css prefixing functionality. Once again thank you for your support I look forward to vcompleting all these tasks so we can have a successful launch.

Thank you,

I appreciate your time in reviewing the supplied video and documentation. If you have any questions about anything please let me know. If you approve of the project moving forward please sign and date on the provided signature lines below. You can then return this document to me at dholloran@danholloran.com.

Sincerly,
Dan Holloran
